APP DEV INTRO CLASS

INTRO TO PROGRAMMING

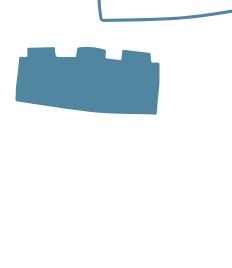

A computer program is a set of instructions that tell a computer what to do. Everything computers do rely on computer programs.

Programs are stored in the memory of computers and let computers do one thing after another.

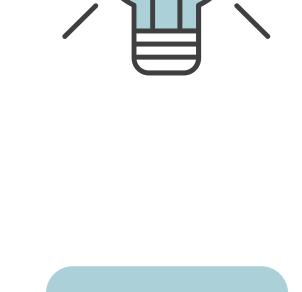

CODE BLOCKS

Code blocks simplify getting started with programming. They allow you to not have to worry about spelling and allow you to experiment by clicking things together.

TYPED CODE

Typed code allows complex concepts to be written in just a few lines. These complex concepts would take many pages of blocks to code.

HASHES

Hashing functions map data of random size to fixed-size values. The values returned by a hash function are called hash values, hash codes, digests, or simply hashes.

WEB DEV

Web Development is the process of coding applications and websites for users. Its the coding that powers everything you see on the web.
