

STARTR

PROGRESSIVE WEB APPS

WHAT ARE PWAs

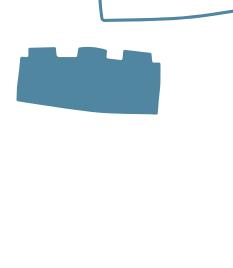

Progressive Web Apps are like web sites, but they can do more! They make web sites more reliable and you can even install them.

A progressive web app is a website you can put on your computer or phone. It's for this reason we use PWAs.

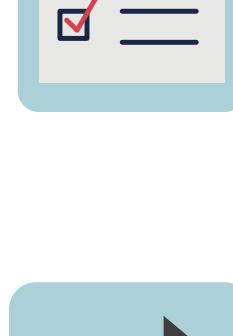

CAPABLE

Progressive Web Apps are very capable. They can listen and talk, they know where they are, and they can see. Progressive Web Apps do thousands of things!

RELIABLE

Apps need to work on slow or flaky networks. Apps need to give people an answer when there's trouble. They need to let people play games if they want to. PWAs work even when the Internet is down!

INSTALLABLE

Progressive Web Apps are like apps on a phone. They can be installed and they show up on the screen. It is possible to find them and switch between them which makes it seem like they are part of the phone.

SUMMERY

Progressive Web Apps provide us with a unique opportunity to deliver an experience our users will love. Using the latest web features to bring enhanced capabilities and reliability, Progressive Web Apps allow what you build to be installed by anyone, anywhere, on any device with a single codebase.
